#### ABSTRACT OF THE DISCLOSURE

A mobile phone and a battery-fixing device. The mobile phone includes a body, an engaging member, and a battery. The engaging member is moveably disposed on the body, and includes a rib having an inclined surface. The battery is detachably disposed on the body, and includes a concave portion corresponding to the rib. The rib is located in the concave portion, and can be separated from the concave portion by the inclined surface. Thus, the battery can be separated from the body.
